Media Coverage

Forbes

RingCentral offers excellent quality. RingCentral enables small and midsize businesses to have what might otherwise be unaffordable smart-PBX features...

BusinessWeek

RingCentral offers the same kind of call-management features you see at large companies, but without the need for a lot of expensive equipment. All you need are the phones and an Internet connection. Everything in life should be so simple.

We rated RingCentral our Editors' Choice of hosted phone VoIP systems because of the number of advanced and sophisticated features the platform offers customers.

The RingCentral system is extremely versatile and can be configured to fit practically any kind of business, whether it's a multi-branch organization, a small business with a high number of callers, or just a business trying to keep up a professional image. Even for a highly mobile workforce, the fact that RingCentral can route calls to employee phones means employees never have to give out their personal numbers, but can still be reachable...

RingCentral's flexibility is its best value, combining VoIP service, number routing, and more. And since one company provides these functions—RingCentral even sells pre-configured VoIP hardware—you'll save additional troubleshooting and configuration hassles.

As easy as that, the business up and running with a full-blown phone network, and San Mateo-based RingCentral is currently leading the pack.

On IP telephony smarts and breadth of features, the RingCentral outshines both Avaya/Netgear and Microsoft.
